The invention relates to a peptide conjugate having the formula:

(R-X)n-peptide where n = 1-10; X = C=O, when the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where the functional group of the side chain is NH2 or OH; OT X = O OR NH, when the R-X group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is COOH or COOH3; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one or two double bonds, cyclobutyl, cyclopeartyl, cyclobexyl oppionally monosubstituted with a 1-5C straight or branched chain alkyl group,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cytostatic; neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bcl-2 superfamily; BH3 domain; cell death agonist; Bad; apoptosis modulation; B cell lymphoma/leukemia 2; cancer; prostate; colorectal; gastric; non-small lung; renal; thyroid; neuroblastoma; melanoma; lymphocytic leukemia; neurodegenerative disorder; AIDS; stroke; myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents the BH3 domain of human BAD. The invention relates to a bel homology domain 3 (BH3 domain), derived from a proapoptotic member of the BCL-2 family. The BH3 polypeptide can be used in a method for promoting apoptosis in a target cell, especially where the cell is a cancer cell a virus infected cell or an autoantibody producing cell. The BH3 polypeptide can be used in therapeutic compositions for treating disease including cancer, other lymphoproliferative conditions, arthritis, inflammation, and autoimmune diseases, which may result from the down regulation of cell death
                                                                                                                                                                                                                                                                                                                                    New peptide conjugates for modulating apoptosis or for inhibiting cell lymphoma/leukemia 2 (Bcl-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               06-APR-2000; 2000WO-US09352.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bcl2 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (UYJE-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC alkyl group, or benzyl. The peptides AAB37001-B37059 represent examples CC of the peptide portion of the conjugate. The peptides represent analogues CC of the Better analogues CC of a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of CC the BH3 domain of the cell death agonist Bad. The peptide conjugate is CC useful for modulating apoptosis in the cells of a subject, or for CC reversing B cell lymphoma/leukemia 2 (Bcl-2)-mediated blockage of CC apoptosis in cancer cells. It is also useful for Inhibiting Bcl-2 CC function. In particular, the peptide conjugate is useful for treating a CC express Bcl-2. The cancer includes prostate, colorectal, gastric, CC express Bcl-2. The cancer includes prostate, colorectal, gastric, CC express Bcl-2. The cancer includes prostate, colorectal, gastric, CC express Bcl-2. The cancer includes prostate, colorectal, gastric, CC express Bcl-2. The cancer includes prostate, colorectal, gastric, CC express Bcl-2. The cancer includes prostate, colorectal, gastric, CC express Bcl-2. The cancer includes prostate, colorectal, gastric, CC express Bcl-2. The cancer includes prostate, colorectal, gastric, CC express Bcl-2. The cancer includes prostate, colorectal, gastric, CC express Bcl-2. The cancer includes prostate, colorectal, gastric, CC express Bcl-2. The cancer includes prostate, colorectal, gastric, CC express Bcl-2. The cancer includes prostate, colorectal, gastric, CC express Bcl-2. The cancer includes prostate solutions. The peptide conjugate is also useful for treating disorders characterized by CC increased apoptosis, e.g. neurodegenerative disorders, acquired infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                             The present sequence represents a protein of 166 amino acids. The sequence is disclosed as being a protein called BBC6 which regulates cell death through interaction with Bcl-2. The DNA may be used for the production of the recombinant protein, which can be used in unspecified therapeutic or diagnostic procedures, as a molecular weight marker, and to raise antibodies that can be used in unspecified diagnostic or therapeutic applications and to reduce or eliminate the biological activity of the BBC6 protein in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    BBC6 protein for regulating cell death.

Bad can be used in screening assays for compounds to treat or prevent diseases characterised by apoptotic call death, such as neurodegenerative disorders, e.g. Alzheimer's and Parkinson's disease, amyotrophic lateral sclerosis, retrinitis pigmentosa and cerebellar degeneration, and myelodysplastic syndromes, e.g. aplastic anaemia and ischemic injury including myocardial infarction, stroke and reperfusion injury. Assays can also be used to obtain apoptosis enhancing compounds to treat or prevent diseases characterised by the loss of apoptotic call death, such as cancers, e.g. systemic lupus erythematosus and immone-mediated glomerulonephritis and viral infections, e.g. herpeavirus, autoiamune diseases, e.g. systemic lupus erythematosus and immone-mediated plomerulonephritis and viral infections, e.g. herpeavirus, autoiamune paxilrus or adenovirus infection. Bad can also be used for

The present sequence is the human APOP-1 protein. This protein, which consider structural and chemical homology with Bcl-2, is involved in cell proliferation. Its coding sequence was isolated by screening a synovial citisuse cDNA library using a computer search for anion acid sequence alignments. The gene and protein can be used in the treatment of various cancers, disorders with associated inflammation such as Addison's concers, adult respiratory distress syndrome, altergies, anaemia, asthma, atheroscierosis, Crohn's disease, ulcerative colitis, diabetes mellitus, complysema, glomerulonephritis, gouth, Graves' disease, irritable bowel syndrome, lupus erythematosus, multiple sclerosis, myasthenia gravis, composition, pericardial inflammation, osteoporosis, rheumatoid arthritis, Sjogren's syndrome and autoimmune thyroiditis, complications of cancer, haemodialysis and extracorporeal circulation, infections, infectious and generic immunodeficiencies, neurodegenerative diseases such as Alzheimer's disease and Parkinson's disease, ischaemic injuries such as myocardial infarction, and wasting diseases including cachexia.
                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel polynucleotide and polypeptide sequences of proteins associated with cell proliferation for diagnosis, prevention and treatment of except cancer, acquired immunodeficiency syndrome, and Parkinson's disease -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes an isolated or synthetic polypeptide (I) comprising a less than full length amino acid sequence of a mutant CC later than the comprising a less than full length amino acid sequence of a mutant CC later than the contains amino acid substitutions at Serl18 of a mutant CC later than the contains amino acid substitutions at Serl18 of a mutant CC later mutine BAD (I) as immunostimulant, neuroprotective, CC later thirtic, antiinflammatory and immunosuppressive activities, and cc can be used as an apoptosis inducer or inhibitor. BAD polypeptides and CC polynucleotides can be used for screening candidate compounds and drugs cf for activity that promote cell survival or apoptosis. Other uses include inducing or inhibiting apoptosis in a cell. Candidate compounds continued in the continued continued in the continued cell death, reperfusion cell death, wound healing, cancer, viral infections, although the continued callosses. The present sequence represents a specifically callosmane diseases. The present sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match 100.0%;

The method is useful for altering the level of p27, cyclin E, Max, Mad, c-Myc, MDM2, p53, Bax, Bad or Bcl-2 polypeptide in a cell. SKp2 and SKp2-like protein levels are useful for detecting tumours, and in monitoring tumor treatment in a mammal. Agents that modulate interactions between SKP and target proteins are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Modulating polypeptide levels in a cell, diagnosing and treating tumor, involves altering levels of proteins such as S-phase kinase associated proteins 1, 2 and cullin/CDC53 proteins -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a human protein which is associated with cell proliferation, designated APOP-1. The specification also describes APOP-2 and APOP-3. The APOP polypeptides are useful for diagnosing, preventing or treating disorders associated with abnormal cell proliferation and apoptosis. The polypeptides and composition are particularly useful for treating or preventing cancer (e.g. brain or breast cancer), a disorder associated with an increase in apoptosis (e.g. Alzheimer's disease or Parkinson's disease) or inflammation (e.g. allergies, gout, osteoarthritis or bronchitis).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polypeptides associated with cell proliferation, useful for preventing or treating cancer (e.g. brain cancer), a disorder associated with an increase in apoptosis (e.g. Alzheimer's disease) inflammation (e.g. gout)

The present invention describes an isolated or synthetic polypeptide (I) comprising a less than full length amino acid sequence of a mutant Bel-XL/Bel-2 associated cell death regulator polypeptide (BAD) or its gragment, which contains amino acid substitutions at Seril8 of a murine BAD, (I) has immunostimulant, neuroprotective, antischaemic, vulnerary, cytostatic, antiviral, and contropic, antischaemic, vulnerary, cytostatic, antiviral, and can be used as an apoptosis inducer or inhibitor. BAD polypeptides and grague can be used for screening candidate compounds and drugs for activity that promote cell survival or apoptosis. Other uses include inducing or inhibiting apoptosis in a cell. Candidate compounds inducing or inhibiting apoptosis in a cell. Candidate compounds inducing or inhibiting apoptosis in a cell. Candidate compounds inducing or inhibiting apoptosis in a cell. Candidate compounds inducing or inhibiting apoptosis in a cell. Candidate compounds inducing or inhibiting apoptosis in a cell. Candidate compounds inducing or inhibiting apoptosis in a cell. Candidate compounds constituted and (mutant) BAD polypeptides are useful in treating inmunodeficiency diseases, meurodegenerative diseases, isochaemic cell death, reperfusion cell death, wound healing, cancer, viral infections, clambing cancer, viral infections, arthritis, infertility, inflammation and cautoimmune diseases. The present sequence represents a BAD BHJ domain or invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               apoptosis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes an isolated or synthetic polypeptide (C) (I) comprising a less than full length amino acid sequence of a mutant CE Bel-XLPG1-2 associated cell death regulator polypeptide (BAD) on its CF fragment, which contains amino acid substitutions at SerilB of a human CE BAD, SerilS of a murine BAD (longer murine BAD) or SerilJ of a human CE BAD (shorter murine BAD). (I) has immunostimulant, neuroprotective, contropic, antiischaemic, vulnerary, cytostatic, antiviral, cantiarthritic, antiinflammatory and immunosuppressive activities, and cc can be used as an apoptosis inducer or inhibitor. BAD polypeptides and CE polynucleotides can be used for screening candidate compounds and drugs cf or activity that promote cell survival or apoptosis. Other uses include conducing or inhibiting apoptosis in a cell . Candidate compounds conducing or inhibiting apoptosis in a cell . Candidate compounds conducing or inhibiting apoptosis in a cell . Candidate compounds conducing or inhibiting apoptosis in a cell . Candidate compounds conducing or inhibiting apoptosis in a cell . Candidate compounds conducing or inhibiting apoptosis in a cell . Candidate compounds cell . Immunodeficiency diseases, neurodegenerative diseases, ischaemic cell . Immunodeficiency diseases, neurodegenerative diseases, ischaemic cell . Immunodeficiency diseases. The present sequence represents a BAD BHJ domain and contomunate diseases. The present sequence represents a BAD BHJ domain the contomunation and contomunate diseases. The present sequence represents a BAD BHJ domain the contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation and contomunation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the BH3 domain of mouse BAD. The invention relates to a bcl homology domain 3 (BH3 domain), the invention relates to a bcl homology domain 3 (BH3 domain), derived from a proapoptotic member of the BCL-2 family. The BH3 polypeptide can be used in a method for promoting apoptosis in a target cell, especially where the cell is a cancer cell a virus infected cell or an autoantibody producing cell. The BH3 polypeptide can be used in therapeutic compositions for treating disease including cancer, other lymphoproliferative conditions, arthritis, inflammation, and autoimmune diseases, which may result from the down regulation of cell death
The invention relates to a peptide conjugate having the formula: (R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where the functional group of the side chain is NH2 or OH; or X = O or OH; when the R-X group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is CO or CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Bcl
                                                                                                                                                                                                                                                                                         New peptide conjugates for modulating apoptosis or for inhibiting cell lymphoma/leukemia 2 (Bcl-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAB37028

CC or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally CC monosubstituted with a 1-5C straight or branched chain alkyl group, CC phenyl optionally monosubstituted with a 1-5C straight or branched chain CC alkyl group, or benzyl The peptides AAB37001-B37058 represent examples CC of the peptide portion of the conjugate. The peptides represent analogues CC of the peptide portion of the conjugate. The peptides represent analogues CC the BH3 domain of the cell death agonist Bad. The peptide conjugate is useful for modulating apoptosis in the cells of a subject, or for CC reversing B cell lymphoma/leukemia 2 (Bcl-2)-mediated blockage of CC spoptosis in cancer cells. It is also useful for inhibiting Bcl-2 CC function. In particular, the peptide conjugate is useful for treating a CC subject afflicted with a cancer characterized by cancer cells that CC express Bcl-2. The cancer includes prostate, colorectal, gastric, CC non-small lung, renal or thyroid cancers, neuroblastoma, melanoma, or CC scote also useful for treating disorders characterized by increased apoptosis, e.g. neurodegenerative disorders, acquired conjugate is also useful for treating disorders characterized by immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

The sequences given in AAR95155-67 represent epitopes derived from the murine bcl-x(L)/bcl-2 associated death promoter (Bad) polypeptide (see also AAR95168). Bad is a 22.1 kD protein which interacts with bcl-2 and bcl-x proteins and regulates cell death. It has homology to the bcl-2-related family clustered in the BHI and BH2 domain. Bad has been found
                                                                                                                                                                                                                                              Polynucleotide encoding bci-x(L)/bcl-2 associated death promoter useful to treat neoplasia and apoptosis and to identify agents inhibiting its binding to bcl-2 or bcl-x(L) to form heteromultimers
                                                                                                                                                                                                                                                                                                                                                                             WPI;

Overexpressed Bad counters the death inhibitory activity of bcl-x(L), but is much less effective at countering the death inhibitory activity of bcl-2. Bad expression can accelerate apoptotic cell death induced by cytokine deprivation in an IL-3 dependent cell line expression bcl-x(L), and its also counters the death repressor activity of bcl-x(L). Bad competes with Bax for binding to bcl-x(L). Bad may be used to identify agents which inhibit its binding to bcl-x(L) or bcl-x(L) to form heterodimers. Such agents may be used to treat conscious such agents may be used to treat the diseases, immunodeficiency diseases, e.g. AIDS.

Prissue specificity: Expressed in A wide Variety of Tissues, and in the cytoplasm.

DOMAIN: Intact HH3 domain is required by BIK, BID, BAK, BAD AND BAX for their pro-apoptotic activity and for their interaction with anti-apoptotic members of the Bol-2 family.

PTM: Phosphorylated on Ser-75 in response to survival stimuli. Subsequent phosphorylation on Ser-99 promotes heteroclimerization with 14-3-3 proteins. This interaction then facilitates the phosphorylation at Ser-118, a site within the BH3 domain, leading to the release of Bcl-x(L) and the promotion of cell survival. Ser-99 is the major site of AKT/PKB phosphorylation, Ser-118 the major site of protein kinase A (CAPK) phosphorylation (by

                                                                                                     terminal regions.

TISSUE SPECIFICITY: Expressed in all tissues tested, including obrain, liver, spicen and heart. In the brain, restricted to epithelial cells of the choroid plexus, Isoform alpha is the more abundant form.
DOMAIN: Intact BH3 domain is required by BIK, BID, BAK, BAD AND BAX for their pro-apoptotic activity and for their interaction with anti-apoptotic members of the Bcl-2 family.

PTM: Phosphorylated on Ser-113 in response to survival stimuli. Subsequent phosphorylation on Ser-137 promotes heterodimerization with 14-3-3 proteins. This interaction then facilitates the phosphorylation at Ser-156 a site within the BH3 domain, leading to the release of Bcl-x(L) and the promotion of cell survival.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            QRYGRELRRMSDEF 158

BINDS THE ACTIVATION DOMAIN OF HIV-1 TAT AND CAN ALSO I HIV-2 AND EIAV TAT PROTEINS IN VIVO. SUBCELLULAR LOCATION: NUCLEAR. THYMUS, PROSTRATE, TE TISSUE SPECIFICITY: SPLEEN, THYMUS, PROSTRATE, TE INTESTINE AND COLON.

SIMILARITY: CONTAINS 1 RING-TYPE ZINC FINGER. SIMILARITY: CONTAINS 1 BOX-TYPE ZINC FINGER.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CANAL

Genet. 29:441-445(1996).

-i FUNCTION: STEREOSPECIFIC CONDENSATION OF PHOSPHOENOLPYRUVATE (PEP)
-AND D-ERYTHROSE 4-PHOSPHATE (EAP) GIVING RISE TO 3-DEOXY-D-
-ARABINO-HERTULOSONATE-7-PHOSPHATE (DAHP).

-i CATALYTIC ACTIVITY: 2-dehydro-3-deoxy-D-arabino-heptonate 7-
-phosphate + phosphate = phosphoenolpyruvate + D-arythrose 4-
-phosphate + H(2)/O.

-i ENZYME REGULATION: INHIBITED BY TYROSINE (BY SIMILARITY).

-i PACHWAY: FIRST STEP IN THE BIOSYNTHESIS OF CHORISMATE WITHIN
-i PACHWAY: FIRST STEP IN THE BIOSYNTHESIS OF CHORISMATE WITHIN
-i SIMILARITY: BELONGS TO CLASS: I DAHP SYNTHETASE EARLILY.

-i SIMILARITY: BELONGS TO CLASS: I DAHP SYNTHETASE EARLILY.
